

Kozeta Salon

Website migration

Domain: kozetasalon.com

Purpose: Preserve the website and business systems while evaluating Wix or compatible alternative hosting.

Recommended approach: If “exactly as is” is the priority, first quote moving the existing React/Express application to a compatible Node.js host. A Wix solution requires rebuilding parts of the site or retaining separately hosted custom systems. An iframe alone does not remove backend hosting costs.

Owner's requirements

- Preserve design, content, images, video, animations, and mobile layout.
- Preserve client login/profile and Phorest integration.
- Keep booking and deposits on Phorest's own booking page.
- Keep the domain and business email working together.
- Retain AI implementation, prompts, tools, and safeguards without activating disabled features.
- Disclose any functionality that cannot be preserved. Do not substitute a basic Wix template that removes custom systems.
- Provide a one-time quote, exclusions, timeline, and full recurring-cost breakdown before implementation.

Scope and verification status

This is a handover document, not a completed migration or production certification. Source inspection and public DNS research support the findings. Mailbox account ownership, live delivery, exact provider-approved mail corrections, current invoices, and a firm hosting quote remain unverified.

No hosting, DNS, domain, email, or application settings were changed to prepare this document.

Approval required: Do not transfer the domain, change nameservers, cancel services, enable AI/payment features, or switch production without explicit owner approval.

What to send with this document

Provide secure access to the complete repository and required media assets. Arrange separate provider invitations and a data backup. This PDF is not a source-code bundle, credential export, or database backup.

1. Systems and compatibility

System	Current code/intended behavior	Migration requirement
Public site/catalog	React site with live Phorest service data.	Retain code on compatible host, or rebuild Wix presentation and service integration.
Booking/deposits	External Phorest booking page; deposits follow Phorest settings.	Preserve link and confirm salon settings. Do not replace with Wix Bookings/Payments.
Login/profile	Enabled. Email/phone lookup with OTP; profile, appointments, purchases, loyalty.	Custom backend must remain or be rebuilt. Real-client delivery/session tests still needed.
AI chat/recommendations	Disabled through portal gate; code retained.	Preserve prompts/provider adapters. Do not enable during migration.
Custom booking/Stripe	In-app booking, checkout, redemption, and refund actions blocked.	Preserve server-side blocks, not just hidden buttons.
Cancellation	Portal cancellation blocked because it can trigger Stripe refund.	Retain call-salon alternative.
SMS/background jobs	SMS static reply; custom reminder/refund sweep disabled. Other cleanup/cache timers remain.	Audit every job and callback; prevent duplicate execution.
Admin deposits	Read-only history intended; writes blocked.	Verify authorization and money-moving restrictions.

Configuration: shared/portalConfig.ts

```
PORTAL_ENABLED = false · LOGIN_ENABLED = true
```

Official booking:

<https://phorest.com/book/salons/kozetasalonandspa>

Architecture options

1. **Existing app on compatible hosting — preferred for fidelity.** Retains most code and UI; still needs secrets, database, jobs, proxy, and portability verification.
2. **Wix frontend + external backend/app.** Rebuild selected pages; retain integrations separately. Adds Wix and backend costs; test authentication, cross-origin behavior, SEO, and navigation.
3. **Wix-native rebuild.** Reimplement features using supported Wix capabilities and external services. Highest parity risk; require explicit feature acceptance before replacing anything.

Wix's standard site-import documentation states external sites cannot be imported unchanged. Existing Fly.io files and iframe work in the repository are not proof of a current deployment. Embedding must be tested for mobile layout, storage/login restrictions, accessibility, and search indexing.

2. Domain and email

Public lookup	Observed September 29, 2026
Domain / registrar	kozetasalon.com / Tucows Domains Inc.
DNS provider	Hover: ns1.hover.com, ns2.hover.com
Root A record	34.111.179.208
Root MX	No MX answer returned by the public resolver.
SPF TXT	v=spf1 include:spf9.megamailservers.com ~all
DMARC TXT	No answer returned at _dmarc.kozetasalon.com.
www CNAME	No CNAME answer returned; check other record types separately.

A Replit verification TXT record was present. This is not a complete DNS export and does not establish the whole hosting setup. Recheck authoritative DNS and account settings before changes.

Email is not verified. The missing MX answer needs investigation. SPF does not prove incoming delivery or identify the active mailbox account. Do not invent mail records or assume a mailbox is working.

Addresses referenced in code: `info@kozetasalon.com` (contact) and `bookings@kozetasalon.com` (default transactional sender). Their presence in code does not prove those mailboxes exist.

Transactional mail: Resend is implemented in `server/emailClient.ts`. If `RESEND_API_KEY` is absent, the code skips sending. Provider account configuration and sender verification have not been confirmed.

Mail-safe plan

1. Confirm domain administration, starting with Hover. Identify mailbox provider, aliases, forwarding, and every outgoing sender.
2. Export all records, including root/www, MX, TXT, DKIM selectors, subdomains, and verification records.
3. Obtain exact MX priorities/targets and SPF/DKIM values from the actual email provider. Confirm DMARC policy with the owner. Do not publish multiple conflicting SPF records.
4. Resolve missing/incorrect mail routing with provider support and owner approval before website cutover.
5. Prefer keeping existing DNS authority initially and changing only the required website records. A domain transfer is not required simply to use Wix.
6. Verify mailbox send/receive with external providers and transactional sending separately; check spam placement and message authentication.

Blocker to an exact correction: mailbox provider/account access and its approved DNS values are required. Preserve existing records until that information is available. Review Wix features before choosing pointing versus nameservers.

3. Technical and secure handoff

Stack: React 18, TypeScript, Vite, Tailwind, Shadcn/Radix, Wouter, TanStack React Query; Node.js/Express ESM backend; Drizzle/PostgreSQL; Phorest, Twilio, OpenAI, Stripe REST shim/CDN, and Resend.

```
npm ci
npm run check
npm run build
npm start
# Development: npm run dev
# Server uses PORT; default 5000
```

Confirm Node/runtime compatibility. Do not run `npm run db:push` on production without schema review, backup, and approval.

Source and data inventory

client/, server/, shared/, required attached_assets/ media, public assets, package/lock files, build configs, replit.md, and .agents/memory/. Inspect Dockerfile, fly.toml, and .dockerignore. Exclude secrets, dependency folders, and unnecessary logs from shared archives.

Start with shared/portalConfig.ts, server/routes.ts, server/index.ts, server/phorestApi.ts, server/emailClient.ts, server/db.ts, drizzle.config.ts, client/src/pages/home.tsx, and client/src/components/portal-card.tsx.

Configuration names — never email the values

Service	Variables to audit
Phorest	PHOREST_BRANCH_ID, PHOREST_BUSINESS_ID, PHOREST_USERNAME, PHOREST_PASSWORD
Twilio	TWILIO_ACCOUNT_SID, TWILIO_AUTH_TOKEN, TWILIO_FROM_NUMBER, TWILIO_WEBHOOK_URL
Security	SESSION_SECRET, ADMIN_PASSCODE
Stripe	STRIPE_PUBLISHABLE_KEY, STRIPE_SECRET_KEY
AI	OPENAI_API_KEY, AI_INTEGRATIONS_OPENAI_API_KEY, AI_INTEGRATIONS_OPENAI_BASE_URL
Data/email/runtime	DATABASE_URL, RESEND_API_KEY, EMAIL_FROM, PORTAL_BASE_URL, PORT

This list is not proof that each variable is configured. Inventory all environment references. Use provider invitations, a password manager, and destination-host secrets; keep private keys out of frontend code. Owner retains ownership, billing, and recovery access.

Access needed: source/current host; Hover; actual mailbox provider; destination/Wix; Phorest; Twilio; database; and relevant AI/Resend/Stripe accounts. Provide minimum necessary permissions.

4. Portability, safety, and costs

Technical risks to verify

- **AI:** main client supports a direct OpenAI key, but a configured integration base URL can still be used; product enrichment references Replit AI configuration. Replace provider configuration consistently, not just the key. Preserve prompts/tools without enabling them.
- **State:** sessions/OTPs/caches include process-local state; pending payments and revoked-session persistence use PostgreSQL. Audit every table and local file. Verify restart, logout, and multi-instance behavior.
- **Jobs:** cache refresh, OTP cleanup, and pending cleanup can run even while the full portal is off. Ensure old/new hosts do not duplicate jobs or webhooks.
- **Callbacks:** inventory all provider URLs; known SMS route is `/api/sms/inbound`. Prepare destination, verify signatures, and avoid duplicate processing.
- **Security:** review broad framing headers, proxy trust, session-secret continuity, authorized client access, and Replit-only development plugins.
- **Time/money:** preserve America/Toronto and daylight-saving handling. Never perform live charges, refunds, vouchers, or appointments as casual tests.

Earlier planning notes listed deposit-limit, legacy-review, and activation-recovery work. Current source contains a deposit ceiling and recovery/persistence logic, so task labels may be stale. Reconcile current implementation and tests rather than assuming either completion or absence. Keep disabled payment paths off.

Cost worksheet — contractor must quote

No reliable total can be quoted without destination selection, workload measurements, account plans, and currency. Require taxes, renewal prices, billing frequency, usage rates, and any minimums.

Recurring item	Quote inputs / treatment
Wix	Selected plan, annual vs monthly; \$0 for this project if Wix is not used.
Backend / hosting	CPU, memory, always-on instances, traffic, requests, backups. Still needed for externally hosted custom systems.
Database	Storage, compute, connections, backup/restore, transfer.
AI	Model/token rates and permitted usage; disabled UI is not proof of zero usage across all jobs.
SMS	Number rental, messages/segments, carrier fees; OTP remains relevant.
Email / domain	Mailbox seats, transactional volume, domain renewal.
Phorest / payments	Existing subscription and applicable provider transaction fees; confirm contract terms.
Maintenance / overlap	Support, monitoring, temporary dual-host operation, and retirement costs.

Owner-reported charges around \$202 and another in the \$100 range are unverified; exact dates, currency, line items, and cause are unknown. Match invoices before attributing charges or promising savings. Moving DNS does not cancel subscriptions.

5. Acceptance, cutover, and email

Required acceptance tests

- Desktop/mobile visual parity, assets, fonts, video, links, and navigation.
- Phorest link targets correct salon; deposit settings unchanged.
- Real OTP delivery for supported login inputs; identify actual delivery channel. Email lookup must not be assumed to mean email OTP delivery.
- Correct client profile, appointments, purchases, loyalty, session restoration, and logout.
- Disabled AI/payment/refund routes blocked server-side; admin authorization intact.
- Business email send/receive and transactional email verified separately.
- Root/www, HTTPS, redirects, canonical URLs, sitemap, and SEO metadata.
- Webhooks/jobs execute once; backup restoration and monitoring verified.

Cutover and rollback sequence

1. Obtain architecture, quote, scope, and recurring-cost approval. Coordinate with any existing domain-launch work; never run competing cutovers.
2. Record current live appearance, source, data, DNS, and provider settings. Define rollback triggers and a responsible contact.
3. Prepare staging and pass acceptance tests without touching production.
4. Obtain separate go-live approval; change only agreed web DNS/callback settings while preserving email.
5. Monitor propagation, SSL, login, booking, email, errors, callbacks, and usage.
6. If critical checks fail, restore recorded DNS/callback settings and reconcile data changes. DNS reversal may not be immediate.
7. Retire old services only after a stable observation period and explicit owner approval. Retain backups and review billing separately.

Contractor deliverables

Architecture recommendation; feature-preservation matrix; fixed/variable cost breakdown; owner-controlled source and accounts; mail/DNS inventory; acceptance evidence; rollback/maintenance instructions; known issues and support terms.

Suggested email subject: Kozeta Salon website migration — scope and handover

Please review the attached handover and quote a migration preserving the design, Phorest booking/deposits, client login, domain, email, and retained AI code.

Wix is preferred only if it preserves the required functionality. Compare it with relocating the existing app and list all recurring costs. Please send your proposed approach, access requirements, timeline, exclusions, and acceptance criteria.

Do not change DNS, transfer the domain, enable disabled AI/payment features, or cancel services without my approval.
